

Recyclable. High-performance. Ready for the future.

95 %
Recyclability
Classe A
certified by
interzero®
zero waste solutions

Dear Customer

Are you looking for a compliant, recyclable packaging solution for your products? We are pleased to introduce our **D4R packaging** for coffee – confirmed by Interzero, one of the leading full-service environmental service providers, with a **recyclability rate of 95%** and awarded the **highest rating, “Class A”**.

With **MonoPE** and **MonoPP**, we offer two high-performance base materials for recycling-oriented coffee packaging and other powdery bulk solids, expanding our established GENPROTECT® range with versatile and future-oriented D4R solutions accordingly.

These solutions already consider the known requirements of the **PPWR** and offer excellent machinability – even on **existing packaging lines**, without the need for additional investments in new packaging equipment.

The choice of base material and the appropriate features can be tailored to your individual requirements.

Contact us at verkauf@okleiner.ch or directly through your usual contact person. Together, we will find the right D4R packaging solution for your requirements.

We look forward to your inquiry!

Our modular system - Your D4R-solution.

One base model. Many customization options.

BARRIERS

High barrier,
aroma retention,
customizable

OPTICS

Transparent
or white
Matt or glossy

PRINTING

Flexo-, digital-,
gravur printing
